

Warm-Up:

Solve for $f'(x)$.

1. $f(x) = x^4 + \sin x$

2. $f(x) = \cos x - \frac{2}{\sqrt{x}}$

Particle Motion

Position(t) = original function

Velocity(t) = 1st derivative

Acceleration(t) = 2nd derivative

Lucky drops an acorn off the top of a 100 foot tree. What is the position of the acorn at time 1 sec, 2 sec, 3 sec with respect to the ground?

$$s(t) = -16t^2 + 100$$

$$s(1) = -16(1)^2 + 100 = 84 \text{ ft}$$

$$s(2) = -16(2)^2 + 100 = 36 \text{ ft}$$

$$s(3) = -16(3)^2 + 100 = -44 \text{ ft}$$

at 3 seconds acorn is on the ground

What is the instantaneous velocity at $t = 1$ and $t = 2$ seconds for the acorn in the previous problem?

$$s(t) = -16t^2 + 100$$

$$v(t) = s'(t) = -32t = v(t)$$

$$v(1) = -32(1) = -32 \text{ ft/sec}$$

$$v(2) = -32(2) = -64 \text{ ft/sec}$$

What is the instantaneous acceleration of the acorn at $t = 1$ sec. and $t = 2$ sec.?

$$a(t) = v'(t) = -32 \text{ ft/sec}^2$$

$$a(1) = -32 \text{ ft/sec}^2$$

$$a(2) = -32 \text{ ft/sec}^2$$

At what time does Lucky's acorn hit the ground?

$$s(t) = 0$$

position = zero

$$s(t) = -16t^2 + 100 = 0$$

$$\frac{-16t^2}{-16} = \frac{-100}{-16}$$

$$t^2 = \frac{25}{4}$$

$$t = \pm \sqrt{\frac{25}{4}}$$

$$t = 2.5 \text{ seconds}$$

~~$$(4t-10)(4t-10) = 0$$~~

$$4t - 10 = 0$$

$$\frac{4t}{4} = \frac{10}{4}$$

$$t = 2.5$$

**General equation for
Position/Acceleration/Velocity**

$$s(t) = at^2 + v_0t + s_0$$

$$-16t^2 + 100$$

a = given

v₀ = initial velocity

s₀ = initial height

For a free falling object....

a = -16 when the height is in feet

a = -4.9 when the height is in meters

A coin is dropped from the top of each of the buildings listed below. Find

- a. the position function
- b. the velocity function
- c. the acceleration function

$v_0 = 0$

CNN Tower	<u>1815 ft.</u>
Sears Tower	<u>1700 ft.</u>
Empire State Building	<u>1454 ft.</u>
Eiffel Tower	<u>324 m</u>

$a = -16$

$a = -4.9$

$$s(t) = -16t^2 + 1815$$

$$v(t) = -32t$$

$$a(t) = -32$$

$$s(t) = -4.9t^2 + 324$$

$$v(t) = -9.8t$$

$$a(t) = -9.8$$

For his next trick, Lucky is being launched out of a cannon that rests on top of a diving board 150 feet in the air! If he follows

$$\longrightarrow s(t) = -75t^2 + 75t + 150 \quad \text{position}$$

at what time will Lucky hit the safety net below? *position = zero*

$$0 = -75t^2 + 75t + 150$$

$$0 = -75(t^2 - t - 2)$$

$$0 = -75(t - 2)(t + 1) = 0$$

$$t - 2 = 0 \quad t = 2 \text{ sec} \quad \text{negative time}$$

What is Lucky's velocity when he hits the net?

$$v(t) = -150t + 75$$

$$v(2) = -150(2) + 75 =$$

$$\underline{\underline{-225 \text{ ft/sec}}}$$

A rock is dropped into the Chatahoochee river from atop a bridge that is 54 meters above the surface of the water. What is the instantaneous velocities at $t = 1$ and $t = 2$ seconds? How long does it take the rock to hit the water? Find the velocity of the rock just before it hits the water.
